Combined Foundation Knowledge quizzes

Tips:

- Learn one quiz at a time. Cover the right hand side and go through each question, checking the answers as you go.
- Get a friend or family member to quiz you in random order
- When you are feeling confident, cover the right side and write the answers to all the ones you can, then check.

Cell structures and microscopy

1. What are the typical features of a eukaryotic cell? 2. Give an example of a eukaryotic cell Bacteria 3. Give an example of a prokaryotic cell Bacteria 4. How do prokaryotic cells compare with eukaryotic cells in terms of size? 5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is the function of the cell wall? 11. What is the cell wall made of? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the elers on microscope and a light microscope? 24. Name two differences between an electron microscope and a light microscope? 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 26. Cell wall, vacuole, chloroplasts 27. Velouse, chloroplast, cell wall in the cell wall in the cells once you've found them? 28. What is the name of the lens near the stage? 29. What is the name of the lens near the stage? 29. What does 'resolution' mean in microscopy? 20. What does 'resolution' mean in microscopy? 21. How do you see more detail in the cells once you've found them? 22. What does 'resolution' mean in microscopy? 23. How have electron microscopes developed the understanding of cells?	Question	Answer
cell? 2. Give an example of a eukaryotic cell Bacteria 4. How do prokaryotic cells compare with eukaryotic cells in terms of size? 5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? Photosynthesis takes place here 9. What is the function of the cell wall? Strength and support 11. What is the cell wall made of? Cellulose 12. What is the function of the cell membrane? Making proteins 13. Where in a cell does respiration take place? Making proteins 14. What is the function of the ribosomes? Making proteins 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? Turn the focusing wheel 11. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the incroscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 17. Which aperiodication microscope and an incroscope and an incroscop	1. What are the typical features of a eukaryotic	Cell membranes, organelles, DNA in a nucleus
3. Give an example of a prokaryotic cell 4. How do prokaryotic cells compare with eukaryotic cells in terms of size? 5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the function of the cell wall? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 20. What is the name of the lens you look down? 21. What is the name of the lens near the stage? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the incroscope and a light microscope and a light microscope and a light microscopes does developed the understanding of cells? Bacteria Prokaryotic cells are smaller It is not contained in a nucleus – it is free floating in the cytoplasm Plasmids 2ell is not contained in a nucleus – it is free floating in the cytoplasm Plasmids 2ell wall, vacuole, chloroplasts Photosynthesis takes place here Sap Mitchondria Mitchondria Making proteins Vacuole, chloroplast, cell wall Vacuole, chloroplast, cell wall Vacuole, chloroplast, cell wall Stage To give the widest field of view Plasmids To give the widest field of view Plasmids Plasmids Plasmid		
3. Give an example of a prokaryotic cell 4. How do prokaryotic cells compare with eukaryotic cells in terms of size? 5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the function of the cell wall? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 20. What is the name of the lens you look down? 21. What is the name of the lens near the stage? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the incroscope and a light microscope and a light microscope and a light microscopes does developed the understanding of cells? Bacteria Prokaryotic cells are smaller It is not contained in a nucleus – it is free floating in the cytoplasm Plasmids 2ell is not contained in a nucleus – it is free floating in the cytoplasm Plasmids 2ell wall, vacuole, chloroplasts Photosynthesis takes place here Sap Mitchondria Mitchondria Making proteins Vacuole, chloroplast, cell wall Vacuole, chloroplast, cell wall Vacuole, chloroplast, cell wall Stage To give the widest field of view Plasmids To give the widest field of view Plasmids Plasmids Plasmid	2. Give an example of a eukaryotic cell	Plant or animal cell
4. How do prokaryotic cells compare with eukaryotic cells in terms of size? 5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the cell wall made of? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope and a light microscope 15. What does 'resolution' mean in microscopy? 16. What does 'resolution' mean in microscopy? 17. Which does 'resolution' mean in microscopy? 18. What is the name of the lens near the stage? 20. What does 'resolution' mean in microscopy? 21. How do you do if the cells are blurry? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope and a light microscope 18. What does 'resolution' mean in microscopy? 20. What does 'resolution' mean in microscopy? 21. How have electron microscopes developed the understanding of cells?		Bacteria
eukaryotic cells in terms of size? 5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is contained in the vacuole? 9. What is contained in the vacuole? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the function of the cell membrane? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you see more detail in the cells once microscope and a light microscope 24. Name two differences between an electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g. ribosomes, mitochondria – with an electron microscope and an uncleus – it is free floating in the cytoplasm in the cytoplasm Plasmids 1 the cytoplasm Plasmids 2 cell wall, vacuole, chloroplasts between an electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g. ribosomes, mitochondria – with an electron microscope and		Prokaryotic cells are smaller
5. What is different about the genetic material of bacteria? 6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the function of the cell wall? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What do you do if the cells are blurry? 10. What do you do if the cells are blurry? 11. How do you see more detail in the cells once you've found them? 12. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope and a light microscope 15. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 18. What does 'resolution' mean in microscopy? 27. What does 'resolution' mean in microscope, mitochondria – with an electron microscope and an incorporation of the cells once objects and of the cell once objects and of the o		,
6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the function of the cell wall? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the magnification electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 17. What is the name of cells? 28. What does 'resolution' mean in microscopy? 29. What does 'resolution' mean in microscopy? 20. What does 'resolution' mean in microscopy? 21. What does 'resolution' mean in microscopy? 22. What does 'resolution' mean in microscopy? 23. How have electron microscopes developed the understanding of cells?		It is not contained in a nucleus – it is free floating
6. What are the additional loops of DNA in bacteria called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is contained in the vacuole? 10. What is the function of the cell wall? 11. What is the function of the cell wall? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 19. What do you do if the cells are blurry? 10. What do you do if the cells are blurry? 11. How do you calculate total magnification of the ensures open and a light microscope and a light microscope developed the understanding of cells? 18. What does 'resolution' mean in microscopy? 19. What does 'resolution' mean in microscope and a light microscope and a light microscope and a light of cells? 10. What does 'resolution' mean in microscopy? 10. What does 'resolution' mean in microscope and a light and resolution and in plant cells once the original plant and support 20. What does 'resolution' mean in microscopy? 21. How do you calculate total magnification of the magnification of the magnification of the magnification electron microscope has much better resolution electron microscope and a light microscope. 22. What does 'resolution' mean in microscopy? 23. How do you calculate total magnification of the magnification electron microscope has much better resolution electron microscope and a light microscope developed the understanding of cells?	_	
called? 7. Name three cell parts often found in plant cells but not in animal cells 8. What is the function of the chloroplast? 9. What is contained in the vacuole? 9. What is the function of the cell wall? 10. What is the function of the cell wall? 11. What is the cell wall made of? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 11. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope and a light microscope 24. Name two differences between an electron microscope and a light microscope and a light microscope seed the understanding of cells? Cell wall, vacuole, chloroplasts between 2 hotocopynthesis takes place here Applead of the cell sapport Applead of the cell seed of the cell sapport Applead of the cell seed of the cell sapport Applead of the cell seed of the cell seed of the seed of	6. What are the additional loops of DNA in bacteria	
but not in animal cells 8. What is the function of the chloroplast? Sap 9. What is contained in the vacuole? Sap 10. What is the function of the cell wall? Strength and support 11. What is the cell wall made of? Cellulose 12. What is the function of the cell membrane? Control what enters and leaves the cell 13. Where in a cell does respiration take place? Mitochondria 14. What is the function of the ribosomes? Making proteins 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? Lowest 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? Eyepiece lens 20. What do you do if the cells are blurry? Turn the focusing wheel 11. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Microscope and micro	·	
but not in animal cells 8. What is the function of the chloroplast? Sap 9. What is contained in the vacuole? Sap 10. What is the function of the cell wall? Strength and support 11. What is the cell wall made of? Cellulose 12. What is the function of the cell membrane? Control what enters and leaves the cell 13. Where in a cell does respiration take place? Mitochondria 14. What is the function of the ribosomes? Making proteins 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? Lowest 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? Eyepiece lens 20. What do you do if the cells are blurry? Turn the focusing wheel 11. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Microscope and micro	7. Name three cell parts often found in plant cells	Cell wall, vacuole, chloroplasts
9. What is contained in the vacuole? 10. What is the function of the cell wall? 11. What is the cell wall made of? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Sap Strength and support Cellulose Cellulose Cellulose Cellulose Cellulose Control what enters and leaves the cell Mitochondria Mitochondria Vacuole, chloroplast, cell wall Vacuole, chlo		·
9. What is contained in the vacuole? 10. What is the function of the cell wall? 11. What is the cell wall made of? 12. What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Sap Strength and support Cellulose Cellulose Cellulose Cellulose Cellulose Control what enters and leaves the cell Mitochondria Mitochondria Vacuole, chloroplast, cell wall Vacuole, chlo	8. What is the function of the chloroplast?	Photosynthesis takes place here
11. What is the cell wall made of? 12 What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 19. What do you do if the cells are blurry? 11. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 16. How have electron microscopes developed the understanding of cells? 17. Which magnification of the cells are blurry? 18. Uowest 19. Uowest 10. To give the widest field of view 10. To give the widest field of view 11. Trun the focusing wheel 12. Understanding of cells? 18. What is the name of the lens you look down? 19. What is the name of the lens you look down? 19. What is the name of the lens pour look down? 10. What is the name of the lens you look down? 10. What is the name of the lens you look down? 11. To give the widest field of view 12. Lowest 13. Where in a cell wall is the cells are blury? 14. Varioule, chloroplast, cell wall 15. Wating proteins 15. Wating proteins 16. Which part of the mill wall is the cell wall 16. Which part of the mill wall is the cell wall 17. Understanding of cells?	·	
11. What is the cell wall made of? 12 What is the function of the cell membrane? 13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 19. What do you do if the cells are blurry? 10. What do you see more detail in the cells once you've found them? 21. How do you calculate total magnification of the microscope? 23. How do you calculate total magnification of the microscope and a light microscope Electron microscope has much greater magnification of cells? Cellulose Control what enters and leaves the cell Mitochondria Making proteins Vacuole, chloroplast, cell wall Vacuole,	10. What is the function of the cell wall?	Strength and support
13. Where in a cell does respiration take place? 14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 19. What do you do if the cells are blurry? 10. What do you see more detail in the cells once you've found them? 21. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 15. Making proteins Naking proteins Nacional wall Naking proteins Nacional wall Naking proteins Nacional wall Naking proteins Nacional patients Stage Nacional patients Naking proteis Nacional patients Nacional patients Nacional patients Nacional patients Nacional patients Nacional patient	11. What is the cell wall made of?	
14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Making proteins Vacuole, chloroplast, cell wall	12 What is the function of the cell membrane?	Control what enters and leaves the cell
14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Making proteins Vacuole, chloroplast, cell wall		
14. What is the function of the ribosomes? 15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Making proteins Vacuole, chloroplast, cell wall Lowest To give the widest field of view In the focusing wheel Increase the magnification Electron teresourion Electron microscope has much greater magnification Electron microscope has much better resolution Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	13. Where in a cell does respiration take place?	Mitochondria
15. Name 3 structures found in a plant cell but not in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Vacuole, chloroplast, cell wall Stage Stage 10 betweet Doiye the widest field of view Turn the focusing wheel Increase the magnification Evepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and		Making proteins
in an animal cell 16. Which part of the microscope does the slide sit on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Stage To give the widest field of view To give the viet sells and sell	15. Name 3 structures found in a plant cell but not	
on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 17. Which magnification of view widest field of view midest field of view magnification of view magnification of view magnification Eyepiece lens 10. Urrn the focusing wheel 11. Increase the magnification Eyepiece x objective lens Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and		
on? 17. Which magnification do you always start with? 18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 17. Which magnification of view widest field of view midest field of view magnification of view magnification of view magnification Eyepiece lens 10. Urrn the focusing wheel 11. Increase the magnification Eyepiece x objective lens Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	16. Which part of the microscope does the slide sit	Stage
18. Why is it necessary to start with the lowest magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? To give the widest field of view Eyepiece lens Objective lens Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and		
magnification? 19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Eyepiece lens Dirrease the magnification Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	17. Which magnification do you always start with?	Lowest
19. What is the name of the lens you look down? 20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	18. Why is it necessary to start with the lowest	To give the widest field of view
20. What do you do if the cells are blurry? 21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Turn the focusing wheel Increase the magnification Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	magnification?	
21. How do you see more detail in the cells once you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Increase the magnification Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	19. What is the name of the lens you look down?	Eyepiece lens
you've found them? 22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope magnification Electron microscope has much greater magnification Electron microscope has much better resolution 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	20. What do you do if the cells are blurry?	Turn the focusing wheel
22. What is the name of the lens near the stage? 23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? 27. What is the name of the lens near the stage? 28. Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	21. How do you see more detail in the cells once	Increase the magnification
23. How do you calculate total magnification of the microscope? 24. Name two differences between an electron microscope and a light microscope magnification Electron microscope has much better resolution 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? Eyepiece x objective lens Electron microscope has much greater magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	you've found them?	
microscope? 24. Name two differences between an electron microscope and a light microscope magnification Electron microscope has much better resolution 25. What does 'resolution' mean in microscopy? 26. How have electron microscopes developed the understanding of cells? The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	22. What is the name of the lens near the stage?	Objective lens
24. Name two differences between an electron microscope and a light microscope magnification Electron microscope has much better resolution 25. What does 'resolution' mean in microscopy? The ability to distinguish between 2 objects 26. How have electron microscopes developed the understanding of cells? Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	23. How do you calculate total magnification of the	Eyepiece x objective lens
microscope and a light microscope magnification Electron microscope has much better resolution The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	microscope?	
Electron microscope has much better resolution 25. What does 'resolution' mean in microscopy? The ability to distinguish between 2 objects Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	24. Name two differences between an electron	Electron microscope has much greater
25. What does 'resolution' mean in microscopy? The ability to distinguish between 2 objects 26. How have electron microscopes developed the understanding of cells? Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and	microscope and a light microscope	magnification
26. How have electron microscopes developed the understanding of cells? Able to see the organelles – e.g ribosomes, mitochondria – with an electron microscope and		Electron microscope has much better resolution
understanding of cells? mitochondria – with an electron microscope and	25. What does 'resolution' mean in microscopy?	The ability to distinguish between 2 objects
understanding of cells? mitochondria – with an electron microscope and	26. How have electron microscopes developed the	Able to see the organelles – e.g ribosomes,
see how they function.	understanding of cells?	mitochondria – with an electron microscope and
· / · · · · · · · ·		see how they function.

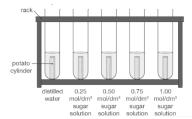

Cell specialisation and division

Question	Answer
1. Put the following into size order, smallest first:	Nucleus, cell, tissue, organ, organ system
Tissue, nucleus, organ, cell, organ system	
2. As an organism develops, stem cells form	Differentiation
different types of cell. What name is given to this	
process?	
3. Name one way in which a sperm cell is	Streamlined
specialized for its function	Contains many mitochondria
	Contains only half genetic information
4. What are the special features of the plant root	Many root hairs given them increased surface
cell that allow them to take up water efficiently?	area
Cell membrane Cell wall	
Vacuole	
Root hair	
Cytoplasm	
5. What is the function of the nucleus?	Contains the DNA
6. What are chromosomes made of?	DNA
7. In body cells, the chromosomes are found in	Pairs
8. What are the 3 stages of the cell cycle?	Interphase, mitosis, cytokinesis
9. What happens during interphase?	All the DNA is copied and so are all cell organelles
	like mitochondria, ribosomes etc
10. What happens during mitosis?	The chromosomes move to opposite sides, the
	nucleus divides
11. What happens during cytokinesis?	The cytoplasm and cell membranes divide
12. Why is mitosis important?	Growth and repair
13. Why does mitosis still take place in fully grown	Replace damaged cells or repair tissues
organisms?	
14. What is a stem cell?	An unspecialized cell capable of becoming any type of cell
15. What is the name of the source of stem cells in	meristem
plants?	e.iste.ii
16. What type of cells can be obtained from stem	Blood cells
cells in bone marrow?	
17. Name two diseases that could be treated using	Paralysis and diabetes
stem cells	
18. What is the main source of stem cells from	Embryos
which all other cells can be made?	
19. What is a 'cloned' cell?	A cell that is identical to the parent cell
20. What is therapeutic cloning?	When the patients DNA is inserted into an egg cell
	to create embryonic stem cells that match the
	patients DNA
21. What is the advantage of being treated with	Less chance of rejection
cloned cells?	
22. Name one risk associated with cloned cells	Transfer of viral infections
23. Name 2 benefits of cloning plants	Producing crop plants with better yields,
	protecting plants from extinction

Transport

Question	Answer
1. Which part of the cell controls what moves in and out of the cell?	Cell membrane
2. What is diffusion?	Spreading out of particles of a gas or in solution, from an area of high concentration to an area of lower concentration
3. Name 3 substances that diffuse into and out of cells	Oxygen, glucose, carbon dioxide, urea (waste product)
4. Name 3 factors that affect the rate of diffusion	Difference in concentration, temperature, surface area of the membrane
i) How is the surface area calculated?	 i) Find the area of each face and add them together. If it's a cube, then find the area of one face and multiply by 6 ii) volume = length x breadth x height
ii) How is the volume calculated?	
6. Why do multicellular organisms need specific exchange surfaces and a system of transport like the blood?	Their surface area to volume ratio is too low without folded internal surfaces
7. What features are usually present in an exchange surface?	Large surface area, thin membranes, good blood supply (in animals)
7. What feature of the lungs gives them a large surface area?	Alveoli
8. What feature of the small intestine gives them a large surface area?	Villi
9. What is osmosis? Ouestions 10 – 15 relate to the investigation on osmosis sh	Movement of water from a solution with a high concentration of water (a dilute solution) to an area of lower water concentration (a more concentrated solution)

Questions 10 – 15 relate to the investigation on osmosis shown below:

The potato pieces were weighed

They were then placed in tubes containing different concentrations of solution After 24 hours, they were removed, blotted with a paper towel and reweighed The change in mass was calculated, then a percentage change calculated

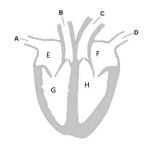

Concentration of the solution
Change in mass
To remove water from the surface as this would affect
mass
They were surrounded by a more concentrated solution
than their cell contents, so water moved out by osmosis
They were surrounded by a more dilute solution than
their cell contents, so water moved in by osmosis
That the solution surrounding the potato is the same
concentration as the cell contents (no water has been
gained or lost)
The movement of particles from a low concentration to a
higher one using energy
Respiration
Mineral ions by the root hair cells
Glucose – from the intestines to the blood

Food tests and digestion

Question	Answer
1. What are the 7 components of food?	Carbohydrates, proteins, fats, water, vitamins, minerals and
	fibre
2. Which food component provides us with most of our energy?	Carbohydrates
3. What is protein needed for in the diet?	Growth and repair
4. In which organ does digestion begin?	Mouth
5. What is an enzyme?	A protein that acts as a catalyst
6. Why does food need to be digested?	So that small soluble molecules can get across the membrane of the small intestine into the blood
7. Which enzyme is produced in the mouth?	Amylase
8. Which is the only enzyme found in the stomach?	Protease
9. Name two organs that produce and release all 3 digestive enzymes	Pancreas and small intestine
10. When amylase acts on starch, what is produced?	Glucose
11. What is produced when proteins are broken down?	Amino acids
12. Which enzyme digests proteins?	Protease
13. Which enzyme digests fats?	Lipase
14. What are the two products when fats are broken down?	Fatty acids and glycerol
15. Where is bile made?	Liver
16. Where is bile stored?	Gall bladder
17. What are the 2 functions of bile?	Neutralize stomach acid to produce the right conditions for
	the enzymes in the small intestine
	Emulsify fats (provide a larger surface area)
18. What is the function of stomach acid?	Kill bacteria in food
19. What chemical is used to test for starch?	Iodine
20. What is the colour change in the chemical named in Q19 if starch is present?	Brown to blue black
21. Which chemical is used to test for protein?	Biuret
22. Describe what you would see in a positive test for protein	Colour change from blue to purple/lilac
23. What colour is Benedicts solution?	Blue
24. What is Benedicts used to test for?	Glucose
25. What is the colour change in Benedicts if the test is positive?	Blue to brick red
26. What are the small molecules produced in digestion used	To build new carbohydrates, fats or proteins in the body.
for?	Glucose is used in respiration
27. How can the Benedicts test be heated safely?	Using a water bath
28. How can foods be tested for the presence of fat?	Add equal volumes of ethanol and water – if the water goes
·	cloudy, fats are present
29. Name a food that is a good source of carbohydrate	Potatoes, rice, pasta, bread
30. What type of foods are good sources of protein?	Meat, fish, cheese, pulses

Cardiovascular system

1. What is the name of the top chambers of the heart? 2. What are the two bottom chambers called? 3. Which blood vessels carry blood away from the heart? 4. Why is the heart known as a "double pump"? 5. What is the name of the artery leaving the left ventricle to take blood to the whole body? 6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the artery leaving the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the artery leaving the right ventricle to take blood to the lungs? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the blood vessel that brings blood back from the lungs to the heart? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carried sidsolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart 26. How he heart? 27. Weirs blood on the left side of the heart 28. How he heart he plate to be one walls that are only one cell thick? 29. Which blood vessels carry blood under low pressure back to the heart? 21. How he heart? 22. How he blood on the left side of the heart 23. How he blood on the left side of the heart 24. Which blood vessels contain valves? 25. How is the blood on the left side of the heart	Q	
2. What are the two bottom chambers called? 3. Which blood vessels carry blood away from the heart? 4. Why is the heart known as a 'double pump'? 5. What is the name of the artery leaving the left ventricle to take blood to the whole body? 6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the artery leaving the right ventricle to take blood to the lungs? 11. What is the name of the blood vessel that brings blood back from the body? 12. What is the name of the blood vessel that brings blood back from the lungs to the heart? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What is the function of the white blood cells? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart 26. How is the blood on the left side of the heart 27. Which blood vessels carry blood under low pressure back to the heart? 28. How is the blood on the left side of the heart 29. Which blood vessels carry blood under low pressure back to the heart? 29. How is the blood on the left side of the heart 20. Which blood on the left side of the heart	Question	Answer
3. Which blood vessels carry blood away from the heart? 4. Why is the heart known as a 'double pump'? 5. What is the name of the artery leaving the left ventricle to take blood to the whole body? 6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood back from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart 26. How is the blood on the left side of the heart 27. The blood on the left is higher in oxygen and lower in		
4. Why is the heart known as a 'double pump'? 5. What is the name of the artery leaving the left ventricle to take blood to the whole body? 6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the artery leaving the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What is the function of the white blood cells? 21. What is the function of the white blood cells? 22. What is the function of the white blood cells? 23. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 15. How is the blood on the left side of the heart 16. Which plood on the left is higher in oxygen and lower in		
Side pumps to the heart 5. What is the name of the artery leaving the left ventricle to take blood to the whole body? 6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? To keep blood flowing one way and stop backflow Right atrium Aorta Coronary arteries Right atrium Coronary arteries itself with blood? Pulmonary artery Pulmonary vein Delumonary vein Delumonary vein Delumonary vein Delumonary even Pulmonary atery Pulmonary ater		
ventricle to take blood to the whole body? 6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 10. What is the function of the white blood cells? 11. Which blood vessels contain valves? 12. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 12. Which blood vessels have walls that are only one cell thick? 12. Which blood vessels corry blood under low pressure back to the heart? 12. How is the blood on the left is higher in oxygen and lower in	4. Why is the heart known as a 'double pump'?	
6. Why are the valves in the heart? 7. Where is the pacemaker located? 8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	, -	Aorta
7. Where is the pacemaker located? 8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	ventricle to take blood to the whole body?	
8. What is the name of the arteries that supply the heart itself with blood? 9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	6. Why are the valves in the heart?	To keep blood flowing one way and stop backflow
9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels contain valves? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	7. Where is the pacemaker located?	Right atrium
9. What is the name of the artery leaving the right ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels contain valves? 23. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 24. Which blood vessels have walls that are only one cell thick? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in		Coronary arteries
ventricle to take blood to the lungs? 10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called Bronchi 14. Where in the lungs does gas exchange take place? Alveoli 15. What are the 4 components of blood? Plasma, platelets, red blood cells, white blood cells 16. Which part of the blood carries dissolved substances? Plasma 17. What is the function of the red blood cells? Carry oxygen 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? Detect and destroy pathogens 20. What are the platelets for? Clotting blood 21. Which blood vessels contain valves? Veins 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in		
10. What is the name of the blood vessel that brings blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 10. What are the platelets for? 11. Which blood vessels contain valves? 12. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in		Pulmonary artery
blood to the heart from the body? 11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in		
11. What is the name of the blood vessel that brings blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Trachea Tra		Vena cava
blood back from the lungs to the heart? 12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 10. What are the platelets for? 11. Which blood vessels contain valves? 12. Which blood vessels contain valves? 13. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 15. Which blood vessels carry blood under low pressure back to the heart? 16. Which blood on the left side of the heart 17. What is the function of the white blood cells? 18. How are the red blood cells adapted for their flexy have no nucleus and lots of haemoglobin function? 19. What is the function of the white blood cells? 10. Detect and destroy pathogens 11. Clotting blood 12. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 13. Which blood vessels have walls that are only one cell thick? 14. Which blood vessels carry blood under low pressure back to the heart? 15. How is the blood on the left side of the heart 16. Which blood on the left is higher in oxygen and lower in		
12. What is the name of the main airway from the mouth to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Trachea Bronchi Alveoli Plasma, platelets, red blood cells, white blood cells, alveoli Plasma, platelets, red blood cells, white blood cells, white blood cells, alveoli Plasma, platelets, red blood cells, white blood cells, alveoli Plasma, platelets, red blood cells, alveoli		Pulmonary vein
to the lungs? 13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 19. What are the platelets for? 10. What are the platelets for? 10. Which blood vessels contain valves? 10. Which blood vessels contain valves? 11. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 12. Which blood vessels have walls that are only one cell thick? 13. Which blood vessels carry blood under low pressure back to the heart? 14. Which blood on the left side of the heart 15. The blood on the left is higher in oxygen and lower in		
13. The two airways that lead into the lungs are called 14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 19. What are the platelets for? 10. What are the platelets for? 11. Which blood vessels contain valves? 12. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 13. Which blood vessels have walls that are only one cell thick? 14. Which blood vessels carry blood under low pressure back to the heart? 15. How is the blood on the left side of the heart 16. What are the 4 components of blood? 18. How are the red blood cells? 19. What is the function of the white blood cells? 10. They have no nucleus and lots of haemoglobin flowers and lots o	12. What is the name of the main airway from the mouth	Trachea
14. Where in the lungs does gas exchange take place? 15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Alveoli Plasma, platelets, red blood cells, white blood cells Plasma, platelets, red blood cells Plasma Plasma Carry oxygen They have no nucleus and lots of haemoglobin They have no nucleus and lots		
15. What are the 4 components of blood? 16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 19. What is the function of the white blood cells? 19. What are the platelets for? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	13. The two airways that lead into the lungs are called	Bronchi
16. Which part of the blood carries dissolved substances? 17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	14. Where in the lungs does gas exchange take place?	Alveoli
17. What is the function of the red blood cells? 18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart They have no nucleus and lots of haemoglobin	15. What are the 4 components of blood?	Plasma, platelets, red blood cells, white blood cells
18. How are the red blood cells adapted for their function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart They have no nucleus and lots of haemoglobin	16. Which part of the blood carries dissolved substances?	Plasma
function? 19. What is the function of the white blood cells? 20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Detect and destroy pathogens Clotting blood Arteries Capillaries Veins	17. What is the function of the red blood cells?	Carry oxygen
20. What are the platelets for? 21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Clotting blood Arteries Capillaries Veins	18. How are the red blood cells adapted for their function?	They have no nucleus and lots of haemoglobin
21. Which blood vessels contain valves? 22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Veins The blood on the left is higher in oxygen and lower in	19. What is the function of the white blood cells?	Detect and destroy pathogens
22. Which blood vessels have a strong elastic wall and thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Arteries Capillaries Veins	20. What are the platelets for?	Clotting blood
thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	21. Which blood vessels contain valves?	Veins
thick layer of muscle to ensure blood is under high pressure? 23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	22. Which blood vessels have a strong elastic wall and	Arteries
23. Which blood vessels have walls that are only one cell thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart Capillaries Veins The blood on the left is higher in oxygen and lower in	_	
thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	pressure?	
thick? 24. Which blood vessels carry blood under low pressure back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in		Capillaries
back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	thick?	·
back to the heart? 25. How is the blood on the left side of the heart The blood on the left is higher in oxygen and lower in	24. Which blood vessels carry blood under low pressure	Veins
76	· · · · · · · · · · · · · · · · · · ·	
	25. How is the blood on the left side of the heart	The blood on the left is higher in oxygen and lower in
	different from the blood on the right?	carbon dioxide

AVena Cava
Bpulmonary artery
CAorta
DPulmonary vein

ERight atrium
Fleft atrium
Gright ventricle
Hleft ventricle

Plant tissues, organs and organ systems

Question	Answer
1. Label the tissues in the leaf section diagram	
below: Upper epidermis, lower epidermis, palisade mesophyll, spongy mesophyll	upper epidermis palisade mesophyll spongy mesophyll lower epidermis stoma (plural stomata)
2. What is the function of the epidermis?	Covers the top and bottom of the leaf
3. Why are their air spaces in the spongy mesophyll?	To allow gases to diffuse
4. In which tissue does most photosynthesis take place?	Palisade mesophyll
5. What is the function of the stomata?	Control gas exchange and water loss
6. Which cells can change shape to open or close the stomata?	Guard cells
7. What is the function of the xylem?	Transport water from the roots to the leaves
8. What is the function of the phloem?	Transport dissolved sugars around the plant
9. What is 'transpiration'?	The evaporation of water through the stomata
10. What is 'translocation'?	The transport of dissolved sugars around the plant in the phloem
11. Which factors can affect the rate of	Wind, temperature, light intensity, humidity
transpiration? 12. How could the equipment below be used to	Measure how far the bubble moves in a set amount
measure the rate of transpiration?	of time (e.g a minute)
Leafy shoot Vaseline seal Scale Bubble	
13. By which method do root hair cells take up mineral ions?	Active transport
14. By which method do root hair cells take in water?	Osmosis
15. Describe the structure of the xylem tissue	Hollow tubes
16. Which substance is present in spirals to strengthen the xylem?	Lignin
17. How are root hair cells specialized for uptake of water and mineral ions?	Large surface area, mitochondria (for energy for active transport)
18. Why are the stomata only found on the underside of the leaf?	It is cooler on the underside, so less water is lost by evaporation

Non-communicable disease

1. What is health? 2. What is a non-communicable diseases? A disease NOT caused by a pathogen and therefore cannot be passed from person to person 3. Name 3 lifestyle factors that are linked with cardiovascular disease 4. Which two organs are affected by alcohol? 5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? One that will not spread around the body 9. Why do benign tumours not spread around the Because they are contained within a membrane
2. What is a non-communicable diseases? A disease NOT caused by a pathogen and therefore cannot be passed from person to person 3. Name 3 lifestyle factors that are linked with cardiovascular disease 4. Which two organs are affected by alcohol? 5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? One that will not spread around the body
therefore cannot be passed from person to person 3. Name 3 lifestyle factors that are linked with cardiovascular disease 4. Which two organs are affected by alcohol? 5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? Checken person Smoking, diet, exercise Checken Checken
person 3. Name 3 lifestyle factors that are linked with cardiovascular disease 4. Which two organs are affected by alcohol? 5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? Description Smoking, diet, exercise Civer and brain Desity Something capable of causing cancer Uncontrolled cell division One that will not spread around the body
3. Name 3 lifestyle factors that are linked with cardiovascular disease 4. Which two organs are affected by alcohol? 5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? Obesity One that will not spread around the body
cardiovascular disease 4. Which two organs are affected by alcohol? 5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? Obesity Something capable of causing cancer Uncontrolled cell division One that will not spread around the body
5. Name a risk factor for Type 2 diabetes 6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? Obesity Something capable of causing cancer Uncontrolled cell division One that will not spread around the body
6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? One that will not spread around the body
6. What is a carcinogen? 7. What is cancer? 8. What is a benign tumour? One that will not spread around the body
7. What is cancer? 8. What is a benign tumour? One that will not spread around the body
9. Why do benign tumours not spread around the Because they are contained within a membrane
body?
10. What is a malignant tumour? One that is capable of spreading around the
body
11. How do bits of malignant tumours spread In the bloodstream
around the body?
12. Name some risk factors for cancer Genetics, diet, smoking, ionizing radiation
13. What happens during an asthma attack? The airways (bronchi and bronchioles) constrict
14. Which virus is linked with cervical cancer? HPV
15. Name 2 diseases linked to obesity Heart disease and type 2 diabetes
16. Which parts of the body are affected by Airways (trachea, bronchi, bronchioles)
asthma?
17. Why do people with asthma often struggle to Less air can flow in and out of the lungs
breathe? Use the diagram below to help explain.
Person without asthma Person with asthma
Relaxed muscle fibres Contracted muscle fibres Air passage
18. Name two lifestyle factors that can be a risk to Smoking, alcohol
unborn babies
19. Name a risk factor for skin cancer Ultraviolet radiation (UV) from the sun
20. Name a risk factor for lung cancer Smoking
21. What is coronary heart disease? When coronary arteries become blocked due to fatty deposits
22. What happens during a heart attack? Coronary artery is completely blocked,
restricting blood flow to the heart, resulting in a
lack of oxygen to the heart muscle
23. How does a stent help treat CHD? Opens up the artery, restoring blood flow
24. How do statins help treat coronary heart Lowers cholesterol levels in the blood
disease?

Question	Answer
1. What is a communicable disease?	One that is caused by a pathogen and so can be
	passed on from person to person
2. What is a pathogen?	Any microbe capable of making us ill
3. What are the 4 types of pathogen?	Bacteria, viruses, protist, fungi
4. Name 4 ways pathogens can be spread	Air, water, direct contact, animal bites
5. In what two ways do pathogens make us feel ill?	Damaging our cells and releasing toxins
6. Where do viruses live and reproduce?	Inside our cells
7. What type of disease is measles?	Virus
8. How is measles spread?	In the air from sneezes and coughs
9. What system does HIV attack?	The immune system
10. How is HIV controlled?	Antiretroviral drugs
11. How is HIV spread?	Unprotected sex or sharing needles
12. Name the plant pathogen that causes a 'mosaic' pattern	Tobacco mosaic virus
on leaves	
13. Why do plants infected with this virus grow less?	Less photosynthesis in the mosaic parts of leaves
14. What are the symptoms of salmonella infection?	Stomach cramps, fever, diarrhea, vomiting
15. What type of pathogen is salmonella?	Bacteria
16. How is the spread of salmonella spread controlled in the	Vaccinating poultry, cooking chicken well
UK?	
17. What type of pathogen is gonorrhoea?	Bacteria
18. What are the symptoms of a gonorrhoea infection?	Yellow/green discharge from genitals
19. How can the spread of gonorrhoea be controlled?	Using barrier protection like condoms
20. What causes 'rose black spot'	A fungus
21. How is rose black spot treated?	Fungicides
22. What type of pathogen causes malaria?	Protist
23. What is the vector for malaria?	Mosquitos
24. Name 2 ways of controlling the spread of malaria	Mosquito nets/reducing breeding grounds for
	mosquitos/insect repellant
25. What is found in the stomach that kills pathogens?	Hydrochloric acid
26. What is present in the trachea and bronchi to prevent the	Mucus and tiny hairs called cilia
entry of pathogens?	
27. In which 3 ways do white blood cells defend against	Phagocytosis (ingesting pathogens and
pathogens?	destroying them), releasing antibodies, releasing
	antitoxins
28. What is in a vaccine?	A dead or weakened form of the pathogen
29. Which pathogens can be killed by antibiotics?	Bacteria
30. Why can antibiotics NOT be used to treat viral infections?	Because viruses live inside our cells
31. From where do we get the following drugs:	Digitalis – foxgloves
a) digitalis	Aspirin – willow trees
b) aspirin	Penicillin – penicillium mould
c) penicillin	
32. What are new drugs tested on first?	Cells and tissues
33. What type of patients are used in stage 1 clinical trials?	Healthy volunteers
34. What is the point of stage 1 clinical trials?	To check for side effects
35. What is a placebo?	A fake treatment with no drug in
36. What is a 'double blind' trial?	One where neither the doctors running the trial
	or the patients know who gets the placebo and
	who gets the real treatment

Photosynthesis

Question	Answer
1. What are the reactants in photosynthesis?	Carbon dioxide and water
2. What are the products in photosynthesis?	Glucose and oxygen
3. Write the equation for photosynthesis	Carbon dioxide + water → glucose + oxygen
4. Why is photosynthesis an endothermic reaction?	Energy is needed (transferred by light)
5. Where in the plant cells does photosynthesis take place?	Chloroplasts
6. Name the factors that affect the rate of photosynthesis	Temperature, light intensity, carbon dioxide
· ,	concentration, concentration of chlorophyll
7. Which substance found in the chloroplasts is needed for	Chlorophyll
photosynthesis to take place?	
8. How does the carbon dioxide needed for photosynthesis	Diffuses through the stomata
get into the leaves?	
9. What is the name of the cells surrounding the stomata?	Guard cells
10. How does the water needed for photosynthesis get from	Through the xylem
the roots to the leaves?	
11. In which plant tissue does the glucose made get	Phloem
transported around the plant?	
12. What is the name of the process by which glucose is	Translocation
transported around the plant?	
13. What is the name of the process by which water	Transpiration
evaporates through the stomata?	
Questions 14 – 20 relate to this investigation which aims to te	st the hypothesis 'The rate of photosynthesis
depends on the light intensity'	
Suburnity objects	
(***	
14. How can the rate of photosynthesis be measured using	Counting the number of bubbles per minute
the equipment shown?	
15. How could the light intensity be changed?	Move the lamp further away
16. What factors would need to be controlled to ensure a	Temperature, plant, carbon dioxide conc
valid conclusion?	
17. How could temperature be controlled?	Using a water bath (DON'T just say 'using a
	thermometer)
18. Why is an LED light used instead of a normal bulb?	LED lamps don't get hot
19. How many distances should be measured?	Minimum of 5
20. Why is the plant in sodium hydrogen carbonate solution	To provide carbon dioxide
instead of just water?	
21. Describe the relationship shown:	As the carbon dioxide concentration increases, so
holosynt	does the rate of photosynthesis, but only up to a
Rate of p	point, when even if the concentration is increased
Carbon dioxide concentration	the rate remains constant
22. Describe the relationship shown:	As the temperature increases, the rate of
Oxyg	photosynthesis increases, but only up to about
0 30 60 Temperature/*C	40°C. After that, an increase in temperature
22 What is a limiting factor?	causes the rate to decrease
23. What is a limiting factor?	A factor that is in the shortest supply and is
20. What is the glugges made in what a suit has is used for 2	therefore limiting the rate of photosynthesis.
20. What is the glucose made in photosynthesis used for?	Converted to starch for storage
	Made into amino acids or fats
	Used in respiration Used to make cellulose for cell walls
	Osed to make cendiose for cen Walls

Respiration & metabolism

Question	Answer
1. Where does respiration take place?	Mitochondria
2. What is respiration?	An exothermic reaction that releases energy needed
	for all living processes
3. What does 'aerobic' mean?	With oxygen
4. What is the equation for aerobic respiration?	Glucose + oxygen → carbon dioxide + water
5. What does 'anaerobic' mean?	Without oxygen
6. What is the equation for anaerobic respiration in	Glucose → lactic acid
animal cells?	
7. Name 3 possible uses for the energy released	Movement
during respiration	Keeping warm
8. What is the chemical formula for glucose?	C ₆ H ₁₂ O ₆
9. Give two ways aerobic respiration is different than	Aerobic uses oxygen anaerobic doesn't
anaerobic	Aerobic produces carbon dioxide and water,
	anaerobic produces lactic acid
	Anaerobic releases much less energy
10. What is the equation for anaerobic respiration in	Glucose → alcohol + carbon dioxide
plant and yeast cells?	
11. What term is used to describe anaerobic	Fermentation
respiration in yeast cells?	
12. Name 2 useful products made using anaerobic	Bread and beer/wine
respiration by yeast	
13. What happens to heart rate during exercise?	It increases
14. Why does the heart rate increase during exercise?	To increase the volume of blood delivered to working muscles
15. Give two changes in breathing during exercise	Breathing is faster and deeper
16. Give two reasons breathing changes in this way	To get more oxygen in and to get rid of more carbon
during exercise	dioxide
17. What is 'metabolism'?	The sum of all the chemical reactions in an organism
18. Name three carbohydrates that can be made from	Starch, glycogen and cellulose
glucose	
19. What additional substance do plants need from	nitrates
the soil to turn glucose into amino acids?	
20. What two substances are needed to make lipids?	Fatty acids and glycerol

Chemistry

Question	Answer
1. What is an element?	A substance that contains only one type of
	atom
2. What is a compound?	A substance that contains 2 or more
	elements chemically bonded together
3. What is a mixture?	A substance containing 2 or more elements
	or compounds that are not joined together
4. What method would you use to separate a mixture	Chromatography
of 2 or more dissolved substances?	
5. What method would you use to separate a mixture	Filtering
of a liquid and an insoluble solid?	
6. Ethanol and water mix together to form a solution	Distillation
 – what method could be used to separate the two 	
liquids?	
7. What was the 'plum pudding' model of the atom?	The atom consisted of a cloud of positive
	charge with electrons randomly scattered
	within it
8. Which atomic particle was discovered first?	Electron
9. What was the major change to the atomic model	The positive charge was contained in a very
that came from the 'alpha scattering' experiment?	small nucleus
10. Which particle did Chadwick discover?	Neutron
11. What is needed in order to change a scientific	New evidence
model and replace it with a new one?	
12. What is the charge on a proton?	+1
13. What is the charge on an electron?	-1
14. Why are atoms neutral overall?	They contain the same number of protons
	and electrons
15. What makes one element different from another?	They have different protons
16. What is the size of an atom?	1 x 10 ⁻¹⁰ m
17. How much smaller than the atom is the nucleus?	10 000 X
18. What is an isotope?	An atom with the same number of protons
	but different numbers of neutrons
19. How do you use the numbers on the periodic	Subtract the atomic number from the mass
table to calculate the number of neutrons in an	number
atom?	
20. What are the differences between the plum	Plum pudding had positive charge
pudding model and the nuclear model?	throughout the atom, nuclear has it within a
	small nucleus
	Plum pudding has randomly scattered
	electrons, nuclear model has them orbiting
	in shells
21. What is the mass of a proton?	1
22. What is the mass of a neutron?	1

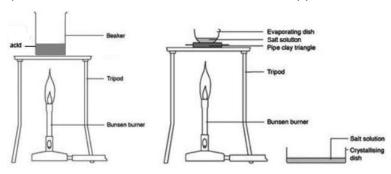

Question	Answer
1. What is used to order the elements in the modern	Atomic number / proton number
periodic table?	, ,
2. What was used in early versions of the periodic table?	Atomic weight
3. What do all elements in the same group have in	Same number of electrons in the outer shell
common?	
4. What did Mendeleev do in his periodic table?	Left gaps for undiscovered elements
5. What do we call atoms with the same number of	Isotopes
protons but different numbers of neutrons?	•
6. What do we call the elements that react to form	Metals
positive ions?	
7. What type of elements form negative ions?	Non-metals
8. Give 3 properties of metals	Conduct electricity, conduct heat, shiny when
	fresh cut
9. Give 3 properties of non-metals	Don't conduct electricity, low melting and
	boiling points, dull
10. Why are group 0 elements unreactive?	They have full outer shells so do not need to
	gain or lose any electrons
11. What happens to their melting and boiling points as	The melting and boiling points increase down
you come down the group?	the group
12. What are the group 1 metals called?	Alkali metals
13. What happens to reactivity coming down group 1?	Reactivity increases down the group
14. Why does this happen?	The outer shell electron is further away from
	the nucleus and more shielded, so is more easily
	lost
15. What are the two products when a group 1 metal	An alkali and hydrogen gas
reacts with water?	
16. What can be added to the solution to prove an alkali	Universal indicator
has formed?	
17. What are the group 7 elements called?	Halogens
18. How many electrons are in their outer shells?	7
19. What happens to melting and boiling point coming	It increases
down group 7?	The cooler has all his cooler to the interest of the cooler has
20. Why does this happen?	The molecules get bigger, so the intermolecular
	forces are stronger and so it takes more energy
21 What happens to reactivity coming down group 72	to overcome the forces
21. What happens to reactivity coming down group 7?	Reactivity decreases down the group The outer shell is more shielded and further
22. Why does this happen?	
	away, so it gets harder to attract an electron into the outer shell
23. When a more reactive halogen is added to a solution	The more reactive halogen displaces the less
of a compound of a less reactive halogen, what happens?	reactive one
24. What sort of compounds do group 7 elements form	lonic
with metals?	Torric
25. Describe 2 properties of these compounds	White crystalline solids, high melting points
23. Describe 2 properties of these compounds	verifice crystamine somus, migh menting points

Question	Answer
1. What does an (s) in an equation mean?	Solid (insoluble)
2. What state of matter is represented by (I)?	Liquid
3. How would a gas be represented in an equation?	(g)
4. What two changes of state can happen at the melting	Melting and freezing
point?	
5. What two changes of state can happen at the boiling point?	Boiling and condensing
6. What does (aq) mean?	Aqueous solution – dissolved in water
7. What forces of attraction are found in ionic compounds?	Electrostatic
8. Why are the melting and boiling points of ionic compounds	The electrostatic forces are strong so it takes
so high?	lots of energy to overcome all of them in the
	ionic lattice
9. What sort of bonding is found in carbon dioxide and	Simple covalent
oxygen?	
10. Why are carbon dioxide and oxygen gases at room	Because their boiling point is lower than room
temperature?	temperature
11. Why do small molecules have low melting and boiling	The forces between the molecules are weak and
points?	don't need much energy to overcome
12. What happens to melting and boiling points as molecules	They increase
get bigger and why is this?	
13. Why do simple covalent molecules not conduct	The molecules have no overall charge
electricity?	Contact
14. What sort of bonding is found in polymers?	Covalent
15. Why are polymers normally solids at room temperature?	Because they are large molecules so the forces
1C What cout of structures are disposed growthite and siling	of attraction are fairly strong
16. What sort of structures are diamond, graphite and silica	Giant covalent structures
examples of? 17. Why do they have high melting and boiling points?	Lots of energy is needed to break all the strong
17. Willy do they have high melting and boiling points:	covalent bonds
18. What sort of bonding is found in metals like gold and	Metallic
silver?	Wetame
19. Why do metals conduct electricity?	Because they have delocalized electrons that
,	are able to move through the metal
20. Why are pure metals easily bent and shaped?	The layers of atoms are able to slide over each
, , , , , ,	other easily
21. What is an alloy?	A mixture of metals
22. Why are alloys stronger than pure metals?	Because the layers are disrupted so they cannot
	slide
23. How many other carbon atoms is each carbon bonded to	4
in diamond?	
24. How many covalent bonds does each carbon make in	3
graphite?	
25. Why does graphite conduct electricity?	It has delocalized electrons that can move
	through the graphite
26. Why is graphite slippery?	Graphite is in layers and they are able to move
	over each other
27. What is graphene?	A single layer of graphite
28. What type of molecules are based on hexagonal rings of	Fullerenes
carbon atoms?	
29. What type of structure is shown in the	nanotube
diagram:	

Reactions of metals and salt production

Question	Answer
1. What is oxidation?	When a substance (eg a metal) reacts with
	oxygen to form an oxide
2. What is reduction?	Removal of oxygen
3. What makes one metal more reactive than another?	How easily it forms an ion
4. Which element is used to extract less reactive metals from	Carbon
their ores?	
5. What are the products when metals react with acids?	Salt and hydrogen gas
6. What is produced when acids react with bases?	Salt and water
7. What is an alkali?	A soluble base – contains OH ⁻ ions
8. What type of salt is formed if hydrochloric acid is	Chloride
neutralized?	
9. What type of salt is formed if sulfuric acid is neutralized?	Sulfate
10. What type of salt is formed if nitric acid is neutralized?	Nitrate
11. How can soluble salts be obtained from solutions?	Crystallization / evaporation
12. Which particle makes a solution acidic?	H ⁺
13. Which particle makes a solution alkaline?	OH-
14. Write the ionic equation for neutralization	$H^+ + OH^- \rightarrow H_2O$
15. What is the range of pH in the pH scale?	0-14
16. How can pH be measured?	Using universal indicator or a pH probe
17. What is the pH of a neutral solution?	7
18. What is the pH of an acid?	0-6.9
19. What is the pH of an alkali?	7.1-14

Q 20 –28 relate the equipment below which can be used to make copper chloride

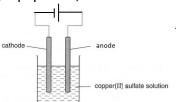

20. Which acid should be used?	Hydrochloric (to give a chloride)
21. Why is the acid heated?	To speed up the reaction
22. Name a suitable base to neutralize the acid	Copper oxide or copper carbonate
23. Why can copper metal not be used?	Copper does not react with acids
24. Why is the base added in excess?	To make sure the acid is fully neutralized
25. How would you know when the base is in excess?	Solid collects at the bottom of the beaker
26. How could the excess base be removed?	Filter
27. How would the salt be obtained from the solution?	Crystallization / evaporation
28. Name a piece of equipment that the dish could be placed	Drying oven
in to crystallise the solution safely	

Electrolysis

Question	Answer
1. Why can ionic compounds conduct electricity when	The IONS can move
molten or in solution?	
2. Why can ionic compounds NOT conduct electricity	The ions are unable to move as they are stuck in
when they are solids?	the lattice
3. What is an electrolyte?	A solution or liquid that is able to conduct
	electricity
4. What is electrolysis?	Splitting (NOT separating) a compound using electricity
5. Which electrode are positive ions attracted to?	Negative
6. Which electrode are negative ions attracted to?	Positive
7. What is the name of the negative electrode?	Cathode
8. What is the name of the positive electrode?	Anode
9. What happens at the electrodes?	Ions gain or lose electrons to become elements
	again
10. Which metals are extracted by electrolysis?	Metals that are too reactive to be reduced using
	carbon
11. Why does electrolysis use a lot of energy?	Lots of energy is needed to melt ionic compounds
	and then the production of the electric current
12. Why is graphite used in the electrodes?	Because it has delocalized electrons that can
	move and so it conducts electricity
13. Why is cryolite added to aluminium oxide before electrolysis?	To lower the melting point
14. What is formed at the cathode in the electrolysis of	Aluminium
aluminium oxide?	
15. What is the product at the anode in the electrolysis of	Oxygen
aluminium oxide?	
16. Why do the anodes need to be continually replaced?	The oxygen produced reacts with the carbon
	electrodes to make carbon dioxide
17. What does (aq) mean?	Dissolved in water – an aqueous solution
18. Which ions are also present if an ionic compound is	H ⁺ and OH ⁻ ions
dissolved in water and then electrolysed?	
19. Why does hydrogen form at the cathode when	If the metal in the solution is more reactive than
solutions are electrolysed?	hydrogen, then hydrogen will be released
20. What is formed at the anode if solutions are electrolysed?	Oxygen or, if a halogen is present, the halogen (group 7 element)
Ouestions 21-26 are about the following equipment used to	1 19 1

Questions 21-26 are about the following equipment, used to electrolyse a solution of copper sulphate

21. Complete the diagram to label the other electrode and to complete the supply of electricity	
22. Which ions are present in the solution?	Cu ²⁺ H ⁺ SO ₄ ²⁻ OH ⁻
23. What will be formed at the cathode and why?	Copper – as it less reactive than hydrogen
24. What will be formed at the anode and why?	Oxygen – there is no halogen present
25. Name a solution that could be used instead of copper	Potassium sulphate (substitute any metal that is
sulphate to produce hydrogen at the cathode	more reactive than copper)
26. Name a solution that could be used instead of copper	Copper chloride
sulphate to produce chlorine at the anode	

Question	Answer
1. What is activation energy?	The minimum amount of energy needed to get a
2	reaction started
2. What is an exothermic reaction?	One in which energy is transferred to the
	surroundings
3. Give 3 examples of exothermic reactions	Combustion, neutralization, oxidation reactions
4. Give an everyday use of exothermic reactions	Self heating cans and hand warmers
5. What is an endothermic reaction?	One in which energy is transferred from the
	surroundings to the reaction
6. Give 2 examples of endothermic reactions	Photosynthesis, thermal decomposition
7. What is energy needed for in a reaction?	In order to break bonds in the reactants
8. When is energy released during a reaction?	When new bonds are made in the products
9. When is a reaction exothermic overall?	If more energy is released when bonds are made
	than was needed to break bonds
10. When would a reaction be endothermic overall?	When more energy was required to break bonds
	than was released when bonds were made
12. What type of reaction is represented by	Exothermic
the diagram shown:	
13. What type of reaction is represented by the diagram	Endothermic
shown:	
energy	
Reaction pathway	
14. Draw an arrow on the diagram to represent the	Do NOT just draw an
activation energy	Potential arrow pointing to the tip
	of the slope
	Reaction pathway
Questions 15 – 19 relate to the equipment below which car	
temperature change by testing 'The temperature change in	the solution depends on the volume of sodium
hydroxide added'	
Therands	
25 and all their subject to the subj	
15. Why is a polystyrene cup used for the reaction instead	To reduce energy transfers (don't say 'stop')
of a beaker?	
16. How could energy losses be reduced further?	Put a lid on the cup
17. If the reaction is exothermic, what will happen to the	It will increase
temperature?	
18. A digital temperature probe can be used instead of a	a) It would increase the accuracy as the digital
thermometer. How could this affect the readings'	readout is easier to read
a) accuracy b) resolution	b) resolution could be increased if the probe can
40 Nama 2 and all all all all all all all all all al	measure to 1 or two decimal places
19. Name 3 control variables for the experiment	Concentration of both acid and alkali, volume of acid,
	starting temperature of the liquids (NOT the
	'temperature of the room')

Energy stores and transfers

Question	Answer
1. Name the 8 energy stores	Kinetic, magnetic, nuclear, electrostatic,
	gravitational potential, elastic potential,
	chemical, thermal
2. Which energy store is filled when an object is lifted upwards?	Gravitational potential
3. Which energy store is filled when an elastic object is stretched or squashed?	Elastic potential
4. Which energy store is filled when an object is moving?	Kinetic
5. If an object falls from a height, which energy store decreases?	Gravitational potential
6. If an object falls from a height, which energy store fills?	Kinetic
7. During an energy transfer, which store is filled when energy is 'wasted' or dissipated?	Thermal store of the environment
8. What unit should mass always be in for a calculation?	Kilograms
9. What is the unit for velocity?	m/s
10. What sort of relationship is shown by the graph:	Directly proportional
11. What is the specific heat capacity?	The amount of energy needed to raise the temperature of 1Kg of a substance by 1°C

Q 12 – 16 relate to the equipment below, which is used to calculate the specific heat capacity of the block.

12. How is the mass of the block measured?	Using a balance / weighing scales
13. Why is water placed in the hole with the	To improve the contact with the block (air is
thermometer?	an insulator)
14. What is the heater for?	To transfer energy to the block
15. Why would the value calculated for specific heat	A lot of energy is transferred from the block
capacity using this method be much higher than the true	to the thermal store of the environment
value?	
16. Name one improvement to the method.	Insulate the block
17. What is power?	The rate at which energy is transferred
18. What is the unit for power?	Watts (W)
19. What is 1 Watt equivalent to in joules?	1 joule per second
20. If the motors shown below both lift the same object,	One would lift faster
but one is more powerful, what would be the	
difference?	
Motor Putey String Load Load	

Efficiency & Energy resources

Question	Answer
1. What are fossil fuels?	Fuels formed from remains of plants and
	animals from millions of years ago
2. What does non-renewable mean?	Will run out one day – are finite
3. Which fossil fuel was formed from the	Coal
remains of dead plants?	
4. What are our main uses for energy resources?	Transport, generating electricity, heating
5. Which energy resource involves burning of	Biofuel
wood or peat?	
6. Which energy resource involves the use of	Geothermal
heat from the Earth's core to heat water?	
7. Give two disadvantages of using fossil fuels	Release carbon dioxide, release sulfur dioxide,
	damage habitats when extracted
8. Why might fossil fuels still be chosen to	They are reliable and plentiful (at the moment)
produce electricity, even though we know about	
their environmental effects?	
9. Which fossil fuel can release sulfur dioxide?	Coal (or oil)
10. What environmental issue does sulfur	Acid rain
dioxide cause?	
11. What are 'renewable' energy resources?	Ones that are not used up / are replenished as
	they are used
12. Which renewable resource uses water falling	Hydroelectric
from a height?	
13. Name an environmental disadvantage with	They can damage habitats as they need a lot of
renewable resources such as solar or wind	space
14. Other than environment, what is the main	They are unreliable – it isn't always sunny or
disadvantage of using solar or wind to generate	windy
electricity?	
15. Which energy resource involves using	Nuclear
uranium or plutonium in a reactor?	
16. Name one advantage of nuclear resources	It doesn't produce any carbon dioxide
17. Give one disadvantage of using nuclear fuel	Produce dangerous nuclear waste
18. Which energy resources are the most	Fossil fuels (mostly oil)
commonly used for transport?	
19. Name the source of energy for solar cells	The sun
20. Which energy resources use the kinetic	Tidal or wave
energy of the sea?	
21. How can energy transfers between two	Using a lubricant (eg oil)
objects in contact with each other be reduced?	
22. Which features of walls affects the cooling of	The thickness and the thermal conductivity of
a building?	the walls.
23. What is the equation linking efficiency, total	Efficiency = <u>useful power output</u>
power input and useful power output?	Total power input

current, potential difference and resistance

Question	Answer
1. What is electricity?	A flow of charge
2. What is current?	The rate of flow of charge
3. What are the units for current?	Amps (A)
4. What are the units for charge?	Coulombs
5. What is this component?	Fixed or ohmic resistor
6. What is this component?	Dioide
7. What is this component?	Thermistor
8. What is this component?	Light dependent resistor (LDR)
9. What is this component?	Light emitting diode (LED)
10. What is the unit for potential difference?	Volts (V)
11. What is the unit for resistance?	Ohms (Ω)
12. What is the relationship shown:	Directly proportional
Potential difference	
13. Which component gives the relationship shown in Q 12?	Fixed/ohmic resistor
14. Which component gives this relationship in a circuit: Potential difference	Filament lamp
15. Why does the current stop increasing even when the pd increases in a filament bulb?	The resistance increases as the bulb gets hot
16. Which component gives this relationship: Current	Diode
17. What happens to resistance in a thermistor as the temperature increases?	The resistance decreases
18. What happens to resistance in a light dependent resistor when light intensity increases?	The resistance decreases
19. How does a diode only allow current in one direction?	It has very high resistance in the other direction
20. Which component is shown:	Variable resistor

Particle Theory

Question	Answer
1. Which state of matter has particles in ordered	Solid
neat rows that are all touching?	
2. Which states of matter cannot be compressed	Solid
(squashed)	
3. What words can be used to describe the	Far apart, random
arrangement of the particles in a gas?	
4. In which state of matter is the attraction	Solid
between the particles the strongest?	
5. Why does 1Kg of a solid take up less space	The particles are all close together in a solid,
than a Kg of gas?	whereas in a gas they are spread out
6. Why are liquids and gases able to flow?	The attraction between the particles is weak so
	they are able to move around each other
7. Name the change of state when a liquid turns	Evaporation
into a gas	Condensation
8. Name the change of state when a gas turns into a liquid	Condensation
9. Which change of state occurs when a solid	Melting
melts?	
10. What happens to the temperature of a	It remains constant
substance while a change of state happens?	
11. What happens to the mass of a substance	It remains constant
during a change of state?	
12. What are the units for mass?	Kg
13. What are the units for volume?	cm ³ or m ³
14. What are the units for density?	Kg/m ³
15. Name the change of state when a solid turns	Sublimation
straight into a gas	
16. How should the particles in a solid be	In neat rows, all touching
drawn?	
17. How should the particles in a liquid be	Randomly, but all touching
drawn?	
18. How should the particles in a gas be drawn?	Randomly, and spaced far apart
19. What name is given to the temperature at	Melting point
which a solid turns into a liquid or a liquid turns	
into a solid?	
20. What term is given to the temperature at	Boiling point
which a liquid turns into a gas or a gas turns	
back into a liquid?	

Radioactive radiation

Question	Answer
1. What is radioactive decay?	When an atom emits particles and/or energy from
	its nucleus in order to become stable
2. What is the rate at which decay takes place	Activity
known as?	
3. What is activity measured in?	Becquerel
4. Name the 4 main types of radiation	Alpha, beta, gamma, neutron
5. What does an alpha particle consist of?	2 protons and 2 neutrons
6. Which structure does an alpha particle resemble?	A helium nucleus
7. What is a beta particle?	An electron
8. How is a beta particle formed?	A neutron splits into a proton and an electron
9. What is a 'gamma ray'?	An EM wave from the nucleus
10. Which of the types of radiation has the	Alpha
shortest range in air (can travel least far)	
11. Which one can travel the furthest?	Gamma
12. Which type of radiation is the most ionizing?	Alpha
13. Which type of radiation is the most	Gamma
penetrating?	
14. What is 'half life'?	The time it takes for the count rate to fall to half its
	initial value or the time taken for half of the atoms
	in a sample to decay
15. In nuclear equations, what are the two ways	⁴ μο ⁴ α
an alpha particle can be represented?	$^{4}_{2}\text{He}$ OR $^{2}_{0}$
16. How is a beta particle represented in nuclear equations?	⁰ ₋₁ e _{OR -1} ⁰ β
17. What is radioactive contamination?	The unwanted presence of radioactive atoms
18. What determines the level of hazard from	The type of radiation they emit (whether alpha,
contamination?	beta, gamma etc) and where the contamination is
	(breathed in, on skin etc)
19. What is irradiation?	Exposure to one of the types of radiation – e.g
	alpha, beta, gamma etc
20. Why is it important that any findings on the	So they can be checked by other scientists
effects of radiation on humans are published?
